

UnifiedGarage — A modern dealer management system

UnifiedGarage replaces the seven separate tools your team opens every morning with one. Instead of bouncing between an inventory spreadsheet, a desking tool, a separate F&I menu app, the service writer screen, a parts lookup, a CRM, and an accounting system, your whole store works out of one piece of software.

Why it exists

Most DMS platforms were built in the 90s and added bolt-ons for everything new. The result is a stack that doesn't talk to itself — your team re-keys the same VIN three times, customers wait for paperwork because parts and service can't see each other, and accounting closes a month late because deal posts get stuck.

UnifiedGarage was built from scratch as one platform. Inventory talks to deals, deals talk to F&I, F&I posts to accounting, customer info flows everywhere — without anyone re-keying anything.

What every role on the floor sees

Sales floor — Today's ups, your active deals, follow-up reminders, and a desking screen that lets you quote three payment scenarios side-by-side without exiting to find the customer's trade.

F&I manager — Menu selling that the customer actually understands, lender submissions, product attach tracking, e-sign packages that drop into the deal jacket automatically.

Service advisor — Write an RO with full intake (fuel level, key tag, mileage in, source), assign it to a tech, get the customer's approval by text before any wrench turns, then push it to billing in one click. The dispatch board shows you what's where.

Technician — A mobile-friendly "my work" view with assigned jobs, parts status, inspection capture (with photos), and a clock-in/clock-out per job line so productivity reports actually reflect reality.

Parts — Stock lookup, purchase orders with receiving, special orders linked to RO lines so the advisor knows exactly when the part lands.

Accounting — A real dealership chart of accounts. Deal posts, RO posts, payments, month-end close, schedules, commissions — and a one-click QuickBooks Online push.

BDC / lead handling — Inbound leads from web, walk-in, phone, recall campaigns, and third-party sources land in one inbox. Round-robin assignment, SLA tracking, follow-up

reminders, conversion to a deal in two clicks.

Manager / GM — One dashboard with the numbers that actually matter: funded gross this period, pipeline value, inventory turn, F&I per copy, tech efficiency, lead conversion, days on lot. Drill from any number into the underlying records.

What's included out of the box

- **Inventory & recon** — landed-to-front-line tracking with photos, VIN decode, market-based pricing, aging alerts
- **Deals & F&I** — worksheet, multi-scenario desking, F&I menu, e-sign, deal jacket, automatic GL posting
- **Service & parts** — repair orders, dispatch board, multi-point inspections, technician time clock, parts inventory, purchase orders
- **CRM & lead routing** — capture, assign, follow up, convert
- **Accounting** — dealership-shaped chart of accounts, journal entries, month-end, QuickBooks Online integration
- **Trade-in appraisals** — structured form with multiple book values, manager bump-approval, automatic deal jacket attachment
- **Customer portal** — your customers see their vehicles, service history, documents, book appointments and pay ROs from their phone
- **Multi-rooftop** — run three stores or thirty out of one platform; share customers across rooftops, transfer inventory, see group-level reports
- **Reports** — gross per copy, F&I penetration, turn time, inventory aging, technician efficiency, CSI, lead conversion

What switching looks like

- 1. Import your data.** Bring inventory, customers, and open deals from Reynolds, CDK, Dealertrack, or a CSV export. We map fields and flag anything that looks off before go-live.
- 2. Train your team.** Each role gets a guided walkthrough built for them. Most users are productive in under an hour. Technicians and parts clerks usually under fifteen minutes.
- 3. Go live.** Run both systems in parallel for a week, then cut over. We're on call for the first weekend so nothing drops.

Most dealers desk their first real UnifiedGarage deal within seven days of signup.

What it costs

Free during the beta. After that: a flat monthly per-rooftop subscription with no setup fee, no implementation fee, and no per-user add-ons. The free trial is 14 days. Cancel anytime.

What it doesn't do (yet)

- **Direct lender integrations** (RouteOne, Dealertrack lender portal). On the roadmap once we have the volume to negotiate the contracts.
- **Inventory syndication out** to Autotrader, Cars.com, CarGurus, Facebook Marketplace. Coming in the next two quarters.
- **Native mobile apps.** The web app works on phones today; a native iOS/Android wrapper is a 2026 deliverable.

Where it lives

- **Web app:** `app.unifiedgarage.com`
- **Public site:** `unifiedgarage.com`
- **Customer portal:** built into the app, branded with your store
- **Support:** `support@unifiedgarage.com` — real humans, not overseas tickets
